

Build Documentation

This project is designed to run seamlessly using **Docker**. Below are instructions for both Docker-based and local builds. Make sure to set up environment variables correctly for both frontend and backend.

Build with Docker (Recommended)

Prerequisites

- [Docker](#)
- [Docker Compose](#)

Steps

1. Clone the Repository

```
git clone https://github.com/amosproj/amos2025ss03-route-planning-app.git
cd amos2025ss03-route-planning-app
```

2. Set Up Environment Variables

Create the following files:

- frontend/.env
- backend/.env

Example contents:

```
# frontend/.env
VITE_API_URL=http://localhost:8080
VITE_GOOGLE_MAPS_API_KEY=your_google_maps_api_key

# backend/.env
GOOGLE_MAPS_API_KEY=your_google_maps_api_key
```

▮ *Replace `your_google_maps_api_key` with your actual Google Maps API key.*

3. Build and Start Containers

```
docker-compose up --build
```

4. Access the Applications

- Frontend: <http://localhost:3000>
- Backend: <http://localhost:8080>

Optional: Local Build (Without Docker)

Frontend

```
cd frontend
npm install
npm run dev
```

Visit: <http://localhost:3000>

Backend

```
cd backend
python -m venv venv
source venv/bin/activate    # or venv\Scripts\activate on Windows
pip install -r requirements.txt
uvicorn app:app --reload --port 8080
```

Visit: <http://localhost:8080>

Frontend Production Build (Locally)

```
cd frontend
npm run build
```

- Output: `frontend/dist/`
- Can be deployed to any static host or CDN

Let me know if you want to include steps for deploying to platforms like Vercel, GCP, or Heroku.
